INNOVATION

A hub of innovation and youth entrepreneurship

The Republic of China sets its sights on becoming the Silicon Valley of Asia.

The founders of Taiwanese startup SmartAll envision a world where a family's appliances and digital devices are controlled by a smart household computer. Not only that, they conceive of a future in which this central hub learns the preferences of family members and intuitively responds to their needs.

This idea may sound like science fiction, but the five innovators behind SmartAll have developed the technology to make it a reality. The government of the Republic of China (Taiwan) recognizes that inventive entrepreneurs such as these deserve support, and it is committed to helping them realize their full potential.

Earlier this year, the creators of SmartAll received grants to pursue their dream at the newly established Taiwan Innovation and Entrepreneurship Center in Silicon Valley. This state-sponsored office is part of the nation's wide-ranging initiatives to attract and cultivate

exceptional tech talent. In just the past year, the government has also set up the Taiwan Silicon Valley Technology Fund to finance startups by Republic of China citizens, and has begun offering entrepreneur visas to foreign nationals.

As the Republic of China celebrates its 104th birthday, it is working tirelessly to create a dynamic business environment and comprehensive support system for innovative new companies such as SmartAll. The government's forward-thinking economic policies are helping young entrepreneurs achieve their bold visions, and are setting Taiwan on the path toward becoming the Silicon Valley of Asia.
